Add Custom Links

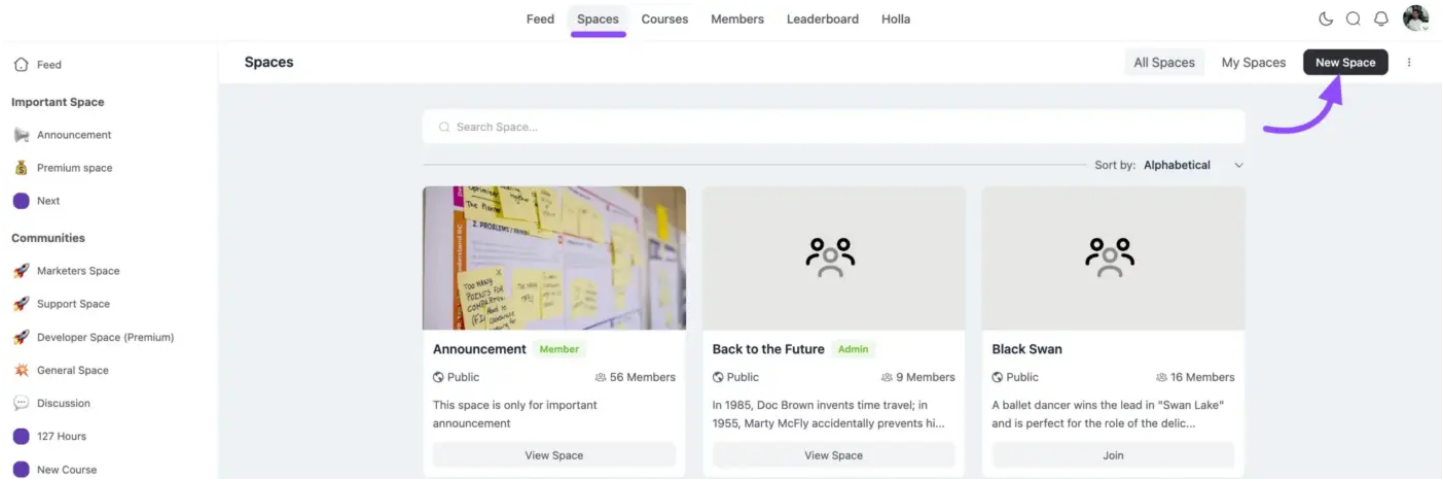

Space Management · https://fluentcommunity.co/docs/add-custom-links/

FluentCommunity's **Custom Links** feature allows you to add personalized links to your community spaces for easier navigation and improved user experience.

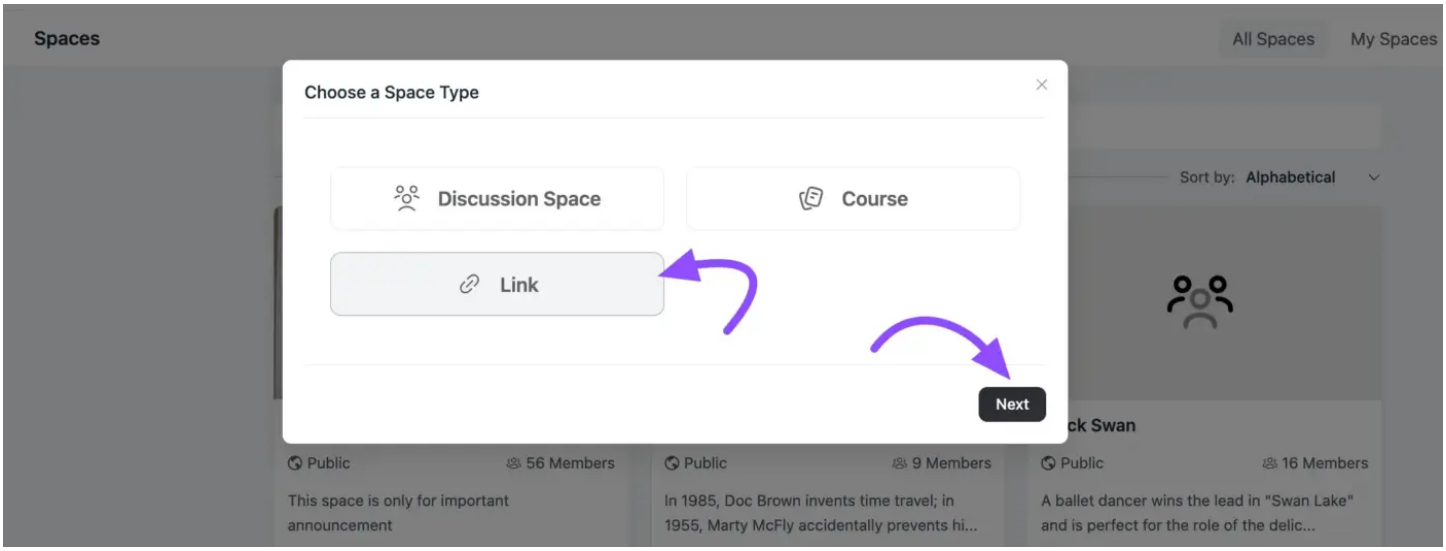

> Custom Links is a **Pro** feature. You'll need the **FluentCommunity Pro** plugin to use this option.

Adding a Custom Link

Go to your FluentCommunity Dashboard and click on **Spaces** in the left sidebar. Click the **New Space** button at the top right corner.

Here, appears a new Popup. Now select **Links** and click the **Next** button.

Create a Custom Link

Now, fill in the details for your custom link:

A. Link Title: Enter a clear and descriptive title that will appear to your users.

B. Permalink: Add the full URL you want the link to direct to.

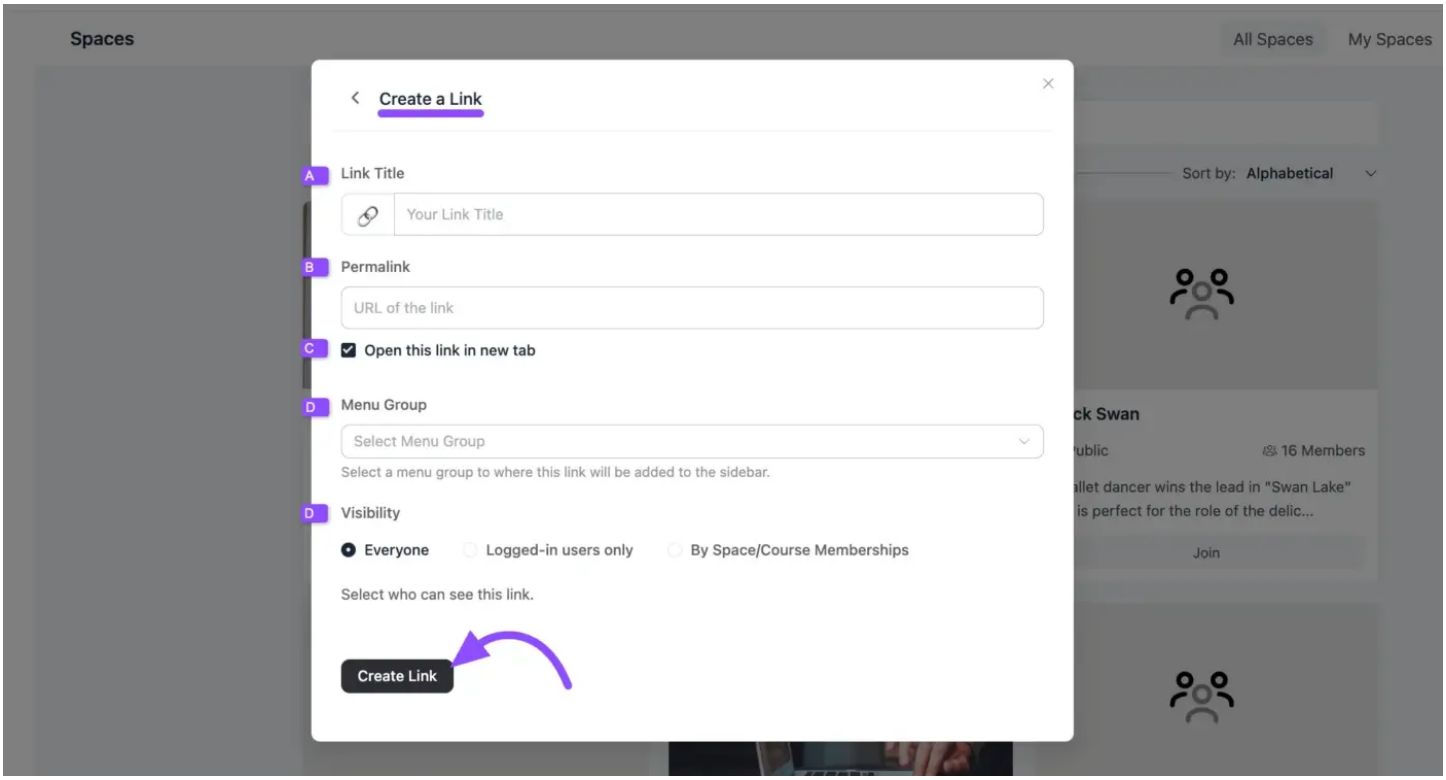

C. Open this link in new tab: Check this option if you want the link to open in a new browser tab when clicked.

D. Menu Group: Select the menu group where you want this link to appear in the sidebar.

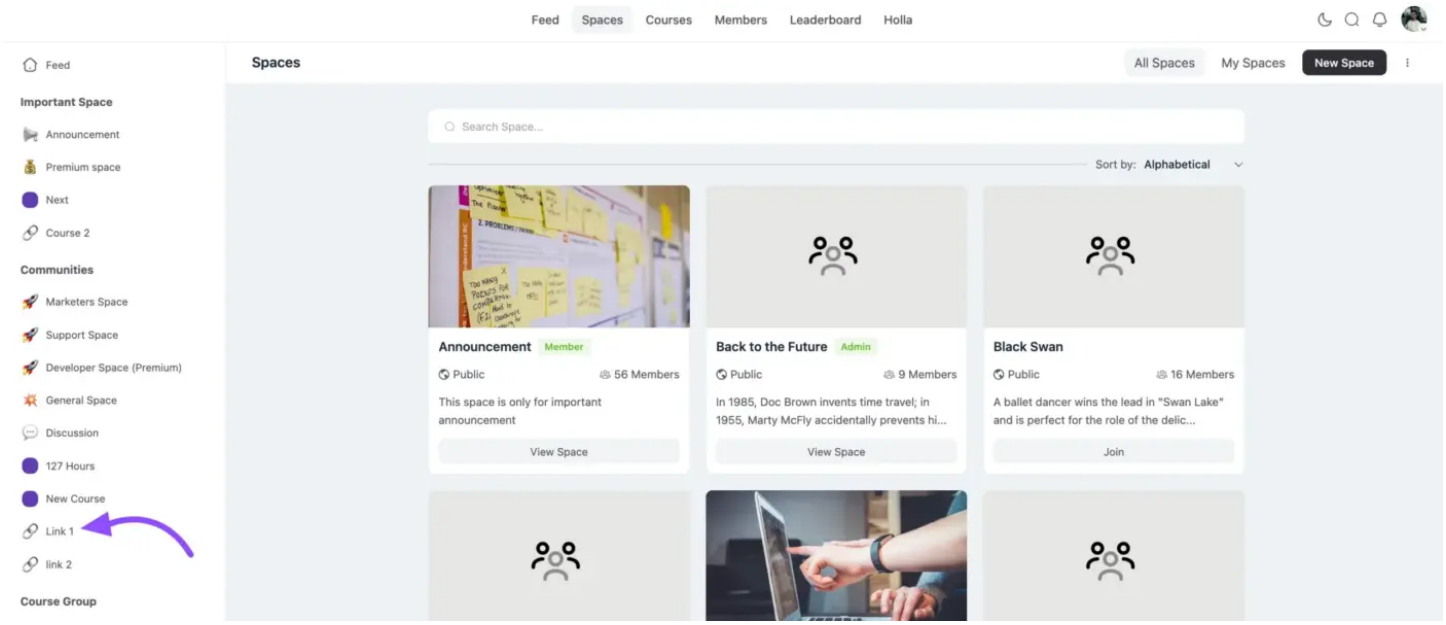

E. Visibility: Choose Who Can See the Link-

- **Everyone**: The link will be visible to all users.
- **Logged-in Users Only**: Only users who are logged into the platform will be able to see the link.
- **By Space/Course Memberships**: Only users who are members of selected courses or spaces will see the link.

After you've entered all the details, click the **Create Link** button to save and add your custom link.

You'll see a confirmation message once the link is successfully created. The link will now appear in the menu group you selected and follow the visibility settings you set during creation.
