Introduction to FluentCommunity

Getting Started · https://fluentcommunity.co/docs/introduction-to-fluent-community/

FluentCommunity is a powerful WordPress plugin that transforms your website into a fully-featured community platform. It gives your members the ability to connect, share, and engage directly on your site. Whether it's posting updates, sharing photos, or creating polls FluentCommunity brings everyone together in an interactive space designed to grow your community.

With features like public and private communities, course management, and direct messaging, you can fully control how your community operates.

FluentCommunity Spaces

FluentCommunity Spaces lets you create and manage multiple communities for your site's users. You can easily control who has access to each community and decide who gets added. Inside each community, members will enjoy the features and limitations you set.

You can create **Public**, **Private**, and **Secret** communities, tailoring the access levels and visibility to fit your needs. This feature allows you to oversee multiple communities and manage interactions exactly how you want.

FluentCommunity Courses

FluentCommunity Course is a great feature that enables you to create, manage, and share courses within your community. You can design and organize your courses with a variety of customization options, ensuring a well-structured and engaging learning experience.

Enrollment is made easy for your community members, providing a smooth process for joining courses without any hassle. You can assign **Course Admins** and **Moderators** to help manage and oversee your courses, ensuring they run smoothly and effectively.

The plugin offers flexible privacy settings for your courses. You can choose from **Public** (open to everyone), **Private** (invite-only or restricted access), or **Secret** (completely hidden unless invited). Additionally, you can group courses and define different **course types** to enhance the organization and functionality of your course system.

FluentCommunity Leaderboard

FluentCommunity also lets you create a **Leaderboard** to showcase member engagement and award titles. You can set up titles and assign point values, which help in promoting members to higher community ranks.

Members earn points through their interactions and liking content. This system encourages active participation and helps highlight top contributors in your community.

FluentCommunity helps you build and manage engaging communities directly on your WordPress site. With Spaces for interaction, Courses for learning, and Leaderboards for recognizing top members, it turns your site into a lively, interactive hub.
